For Immediate Release September 1, 2003

An All New Fall Protection System for Residential and Commercial Framing

Camarillo, CA USA – Safety Pole Incorporated announced today that it will launch an all new fall protection system for residential and commercial framing construction at the California Building Industry Show running October 15th through the 17th at the Anaheim Convention Center. This new OSHA compliant system is designed to protect framers working at heights during the building of residential homes and apartment complexes.

The new patented Safety Pole System, designed and in use by a cost and safety conscious framer, protects workers during the installation of second floor exterior walls, roof trusses, fascia and roof sheathing.

According to the framer/inventor the system is OSHA compliant, simple to setup and takedown, protects-yet does not hamper the workers, and cost effective. Cost effective because the system has a quick return on investment. The system requires minimum set-up time, it is very durable and protects framers and builders from increasing workman's compensation claims, rising insurance costs and potential OSHA fines and penalties.

In less than 1 hour, two workers can set-up and takedown the Safety Pole System. This compares to two workers over 8 hours with the present systems. In addition, the Safety Pole is extremely durable. Over the last several years, the framer/inventor has been installing the Safety Pole System in his jobs throughout southern California. He has built hundreds of homes using these systems and he is still using the original systems without repair or replacement. According to the framer, this compares to other fall protection systems which only last a maximum of 15 jobs before it would need repair and/or replacement.

And it is safe. Engineered to protect up to six workers at one time, the Safety Pole System has been successfully tested by a third party OSHA Compliance Company and a major independent fall protection company.

Demonstration videos and product literature will be available at the upcoming show or in advance by calling the Safety Pole sales line at (805) 857-4256 or visiting on the web at www.safetypole.com.

About The Companies:

The Safety Pole Company –Founded in 2002, Safety Pole Incorporated manufactures and markets the Safety Pole System to safety conscious builders and framers.
